AEGISORB DEFENSE

Present by CelestialSentinel

Real-time Orbital Threat Detection and Response System
for Spatial Assets & LEO Operations

INTRODUCTION

Aegisorb is a scalable, sustainable defense and operations platform for Low Earth Orbit (LEO).

It delivers real-time orbital situational awareness, threat detection, and operational insights for satellite operators, space agencies, and commercial ventures. Aegisorb addresses the growing need for safe, profitable, and sustainable LEO operations while actively mitigating the risks of space debris, cyberattacks, and signal disruption.

CORE SERVICES

Real-Time Orbital Visualization

- A 3D interactive model of Earth, satellites, and orbital paths.
- Dynamic simulation of threats, debris, and communications disruptions.

Threat Detection & Alerts

- AI-assisted detection of orbital threats (debris, collisions, cyber intrusions, signal jamming).
- Instant alerts with threat location, type, and severity.
- Defense Dashboard - Logs and alerts for operational transparency.

Business Insights Panel

- Operational dashboards for decision-making.
- Cost analysis, threat mitigation strategies, and risk assessments.

MARKET & IMPACT

Target customers include:

- National space agencies (NASA, ESA, ISRO)
- Commercial satellite operators (SpaceX, OneWeb, Planet Labs)
- Defense and research organizations

Impact:

- Reduced costs from debris collisions and downtime.
- Enhanced situational awareness for orbital safety.
- Foundation for sustainable space commercialization.

CHALLENGES & OPPORTUNITY

- LEO is transforming into a vibrant commercial space with opportunities for research, satellite services, and space tourism.
- Increasing orbital traffic raises risks: debris collisions, cyberattacks, and signal jamming.
- NASA seeks innovative solutions to make LEO Operations safe, sustainable, and scalable.

VALUE PROPOSITIONS

- Scalability: Integrates with additional satellite networks, expanding across agencies and operators.
- Sustainability: Tracks and models debris impact to reduce orbital hazards and extend satellite lifespan.
- Resilience: Real-time detection enhances operational safety for high-value LEO missions.
- Profitability: Protects investments in satellite infrastructure and opens commercial opportunities for safer orbital activities.

REVENUE MODEL

- Subscription-based licensing for satellite operators.
- Premium analytics for threat prediction and orbital safety.
- Partnerships with space agencies for shared operational access.

USE OF FUNDS

Our plan for using funds generated from investors is straightforward. We'll allocate 40% towards further developing our products, ensuring they stay competitive and meet customer needs.

30% will be invested in infrastructure and operations to support our expanding business and improve efficiency.

20% will go into marketing and sales efforts to attract new customers and drive revenue growth. Finally, 10% will be set aside for strategic initiatives like market expansion and partnerships to fuel long-term growth.

A. 40% Product Development

B. 30% Infrastructure and Operations

C. 20% Marketing & Sales

D. 10 % Expansion and Growth Initiatives

ALIGNMENT WITH NASA SPACE APPS CHALLENGE

Aegisorb directly addresses NASA's challenge of commercializing LEO sustainably and responsibly:

- Provides an operational platform for LEO activities.
- Addresses regulatory and environmental challenges through debris mitigation modeling.
- Supports international cooperation by offering scalable API and data sharing.
- Demonstrates a prototype for real-time orbital defense and business intelligence.
